Understanding water risks

|

Author(s)

Orr, Stuart Cartwright, Anton Tickner, Dave

Description / Abstract

WWF's Water Security Series sets out key concepts in water management in the context of the need for environmental sustainability. The series builds on lessons from WWF's work around the globe, and on state-of-the-art thinking from external experts. Each primer in the Water Security Series will address specific aspects of water management, with an initial focus on the inter-related issues of water scarcity, climate change, infrastructure and risk.

Publication year

2009
